rather starve than work. An Englishman, James Franklin, wrote in 1828, for example:

> Experiments may be tried, laws may be enacted, and encouragement given, but nothing short of coercion and want will impel the Haytian to labour; and I have my doubts as to the practicability of enforcing labour in Hayti until the people have been better instructed, and their characters become changed.

As Franklin summarized it: "Nature is too generous to the Haytian; he never wants, and so never works for hire, as do free labourers in other countries."[1]

The early nineteenth century saw a flood of such bitter comments about the remains of the once rich and flourishing French colony of St. Domingue. The vast productivity of Haiti under French rule had made that colony one of the richest in the New World. The country was dotted with sugar mills, brick-covered wells, and warehouses; and carefully built brick aqueducts, irrigation canals, locks, and dams assured water for the plantations. In 1790, under the slave system, Haiti had exported 163,000,000 pounds of sugar. In 1826, a quarter of a century after the revolution, it was reported to have exported 33,000 pounds.

This falling off in production and exports doubtless had many causes, but one of the most significant was the Haitian's revolt not only against slavery but also against continuing the same kind of work he had performed as a slave. He saw not too much difference between forced, unpaid labor and working for any large landholder at subsistence wages. To the Haitian slave the inspiring battle cry of the French Revolution did not mean that all men would work together on another's man plantation and receive the same wages. It meant that every man would have his own garden to work for himself as he chose; every man would be a full citizen, with land of his own, free to come and go, to plant what he wished, to sell what he could. Despite long years under a colonial slave system, the Haitian still remembered a different way of life in Africa, where mass production for export was not the primary objective of labor.

At the beginning of the nineteenth century the population of Haiti was not much more than half a million—less than one sixth of what it is today. There was plenty of land, and much of it had not yet been wasted by constant tilling and erosion. When the French were driven out, the Haitian peasant re-created an economic world of his own liking. The plantation system which had poured out sugar and coffee and indigo for Europe faded away, and in its place there sprang up an agrarian system which has continued until the present day. In the early
